

*** ViturWeb.zip**

- Extract the zip file.
- Open the **index.html** file to view the website.

*** ViturModel.zip**

- After extracting the **ViturModel** folder, open **Google Colab**.
- Go to **File > Upload notebook** and select the **ViturnAI_Run** file.
- Then go to **Runtime > Change runtime type > GPU**, and select **Run All**.
- Once the notebook finishes running, you will see a *URL ending with .gradio.live*.
- Open this URL to use the model, or use it directly within Colab.

*** Libraries & dependencies:** requirements.txt

 All requirements are integrated in the source code to automatically install when running the code.
